

Requirement Analysis

Group-4

Hospital Appointment Scheduling System

Goal: To build a web application that can be used to schedule,view,cancel and edit appointments at a hospital.

Stakeholders:

Stakeholders	Interest/Need
Patients	Schedule,view and cancel appointments.
Doctors	View and approve their appointments.
Administrators	Manage Patient and Doctor accounts and system configurations.

Actors:

1. Patients
2. Doctors
3. Administrators

Functional Requirements:

Actors	Functional Requirements
Patients	View available doctors;Schedule appointments;View their own appointment status;Cancel appointments.
Doctor	View all of their appointments;Approve the appointments;
Administrator	Manage users and system configurations.

Non-Functional Requirements:

1. Security: Users and Administrators login details must be secure.
2. Response Time: The model must be able to respond within a reasonable amount of time.
3. Performance: The model must ensure that the scheduled time is relevant.
4. Availability: The appointments must be available for the doctors and patients to view.

Functional vs Non-Functional Requirements:

Functional	Non-Functional
Schedule an appointment	Performance,Response time
Approve an appointment	Performance,Response time
Delete an appointment	Performance,Response time
Reschedule an appointment	Performance,Response time
View appointments	Availability
Login to account	Security

User Stories

Patient: As a patient I want to be able to schedule,view,delete my appointments.

Acceptance Criteria:

1. Given the user is logged in as a patient.
2. The patient must select a doctor.
3. The patient must select a time schedule.

Doctor: As a doctor I want to be able to view and approve my appointments.

Acceptance Criteria:

1. Given the user is logged in as a Doctor.

Administrator: As an administrator I want to be able to manage the Patient and doctor accounts.

Acceptance Criteria:

1. Given the user is logged in as a Administrator.

From Requirement to Development:

Stage	Example
Business Requirement	Patients should be able to schedule,view and delete appointments
User Story	As a user I want to be able to schedule an appointment with the doctor so that I can meet the doctor.
Acceptance Criteria	The user must select a doctor and select a timeslot.
System Design	Appointment UI and central controllers
Database Design	Patient and Doctor records are stored in SQL Server.
Sprint	Schedule the feature in the appropriate sprint.
